

CONTENTS

Preliminaries: Introduction to Statistical Investigations

Section P.1: Introduction to the Six-Step Method

Section P.2: Exploring Data

Section P.3: Exploring Random Processes

UNIT 1: FOUR PILLARS OF INFERENCE: STRENGTH, SIZE, BREADTH, AND CAUSE

Chapter 1: Significance: How Strong is the Evidence?

Section 1.1: Introduction to Chance Models

Section 1.2: Measuring the Strength of Evidence

Section 1.3: Alternative Measure of Strength of Evidence

Section 1.4: What Impacts Strength of Evidence?

Section 1.5: Inference on a Single Proportion: Theory-Based Approach

Chapter 2: Generalization: How Broadly Do the Results Apply?

Section 2.1: Sampling from a Finite Population

Section 2.2: Inference for a Single Quantitative Variable

Section 2.3: Errors and Significance

Chapter 3: Estimation: How Large is the Effect?

Section 3.1: Statistical Inference – Confidence Intervals

Section 3.2: 2SD and Theory-Based Confidence Intervals for a Single Proportion

Section 3.3: 2SD and Theory-Based Confidence Intervals for a Single Mean

Section 3.4: Factors that Affect the Width of a Confidence Interval

Section 3.5: Cautions When Conducting Inference

Chapter 4: Causation: Can We Say What Caused the Effect?

Section 4.1: Association and Confounding

Section 4.2: Observational Studies versus Experiments

UNIT 2: COMPARING TWO GROUPS

Chapter 5: Comparing Two Proportions

Section 5.1: Comparing Two Groups: Categorical Response

Section 5.2: Comparing Two Proportions: Simulation-Based Approach

Section 5.3: Comparing Two Proportions: Theory-Based Approach

Chapter 6: Comparing Two Means

Section 6.1: Comparing Two Groups: Quantitative Response

Section 6.2: Comparing Two Means: Simulation-Based Approach

Section 6.3: Comparing Two Means: Theory-Based Approach

Chapter 7: Paired Data: One Quantitative Variable

Section 7.1: Paired Designs

Section 7.2: Simulation-Based Approach for Analyzing Paired Data

Section 7.3: Theory-Based Approach to Analyzing Data from Paired Samples

UNIT 3: ANALYZING MORE GENERAL SITUATIONS

Chapter 8: Comparing More Than Two Proportions

Section 8.1: Simulation-Based Approach to Compare Multiple Proportions

Section 8.2: Theory-Based Approach to Compare Multiple Proportions

Chapter 9: Comparing More Than Two Means

Section 9.1: Simulation-Based Approach for Comparing More Than Two Groups with a Quantitative Response

Section 9.2: Theory-Based Approach to Comparing More Than Two Groups with a Quantitative Response

Chapter 10: Two Quantitative Variables

Section 10.1: Summarizing the Relationship between Two Quantitative Variables Using the Correlation Coefficient

Section 10.2: Inference for Correlation Coefficient: A Simulation-Based Approach

Section 10.3: Least Squares Regression

Section 10.4: Inference for Regression Slope: Simulation-Based Approach

Section 10.5: Inference for the Regression Slope: Theory-based Approach

APPENDIX: Calculation Details

APPENDIX: Transforming to a new scale

APPENDIX: Stratified and cluster samples
