

This is the sixth set of corrections for the sixth edition of *Probability and Statistical Inference*.

- Page 479, line 8, in the expression for Q , an n_j is missing from the denominator. This expression **should be**

$$Q = \sum_{j=1}^2 \sum_{i=1}^k \frac{[Y_{ij} - n_j(Y_{i1} + Y_{i2})/(n_1 + n_2)]^2}{n_j(Y_{i1} + Y_{i2})/(n_1 + n_2)}$$

- Page 689, the answer for Exercise 7.4–9 **(a)** 0.5688; **(b)** [0.1124, 3.3045]. **should be** 7.4–9 **(a)** 0.5688; **(b)** [0, 1.905], yes.
